This is in response to the issue below regarding the check engine light illumination in a 2008 Cummins diesel truck.

The check engine light, or malfunction indicator lamp (mil), may illuminate for several reasons. Cummins has issued software updates for some of their 2008 model year Dodge trucks in order to address mil issues. Please confer with your dealer to insure that the latest Technical Service Bulletins have been applied to your vehicle. These TSB's should be free of charge.

It has come to our attention that another TSB or recall maybe be issued soon to address possible "false" mils pertaining to some emission control hardware. If this turns into a recall, you will be notified by the manufacturer. A TSB may require you to again contact the dealer on your own volition.

Finally, filter regeneration may require increased engine loads. Ideally, the diesel particulate filter will burn off soot during a high temperature regeneration event. Restricting filter regeneration to high temperatures insures that the particulates in the filter are combusted as cleanly as possible. A heavy duty truck with a diesel particulate filter (DPF) that is continually run at idle or in only light load conditions would represent the most likely scenario for a DPF mil. If the dealer cannot remedy the solution, I would try 30 minutes of continuous highway operation to clean out the filter.

Thank you for your interest in the environment!

Chris Nevers

This issue should be forwarded to Christopher Nevers in CISD.

The issue/question is related to the diesel particulate filter, not just the check engine light.

Discussion Thread

Customer - 08/07/2008 06:04 PM
I just bought a new 2008 Dodge with a diesel engine. The vehicle is equipped
with the new diesel particulate filter that is 2010 compliant. I only have
5000 miles on the vehicle and the check engine light has already come on twice
requiring two trips to the dealer to service the new exhaust filtering
system. The system can be cleaned temporarily but will be a reoccurring
problem. Are there any plans for a new type of exhaust filtering system for
diesel engines as this system is ineffiecient and causes more pollution than
it prevents?
